

NO PLASTIC TAX:  
AIR CUSHION FILM MADE FROM POTATO STARCH

**PlantWave**

PlantWave air cushion films are 100% biodegradable. They are made from regrowing resources, including potato starch. The potato starch blend is completely broken down by microbes in the environment and leaves no microplastic.

# PlantWave – biodegradable and home compostable

The unique air cushion film is suitable for packaging all products, e.g. cosmetics, pet supplies, medicines, electronic devices, sensitive components, textiles - but also food is best packed in PlantWave. The film thickness is minimal at 20 µm. The regular perforation allows the air cushions to be easily separated. Last but not least, the cost savings compared to crumpled paper cushioning are amazing.

The disposal is done with organic waste or via compost in the garden - simple, environmentally friendly.

The PlantWave is suitable for the filling of small to large cavities and as an intermediate layer. PlantWave is available as air cushion filler or wrapper.

**ClimatePartner**
