

THE FIRST AIR CUSHION MADE FROM PLASTIC TRASH

AirWave ClimaFilm-100

AirWave ClimaFilm-100 is:

- Climate Partner certified, 100% unique
- 100% made from recycled polyethylene
- 90% post consumer recycled (PCR) - made from collected trash
- awarded with the Blue Angel

www.floeter.com

AirWave ClimaFilm-100 ClimatePartner certified

ClimaFilm-100 air cushion film is made from 100% recycled materials, 90% of which is collected post consumer plastic.

Not all recycling is the same: pure waste from industrial production (PIR) is often used for the production of films because it is easy to process. FLOETER, goes one step further and uses 90% PCR - these are plastics that have really been used in a product before, then collected, washed, sorted and processed. The generated recyclate is later added back to the film.

This is what real sustainability looks like!
